PAGE NO	1 / 1

As AYFLEKS PACKAGING, we hereby commit to:

- ❖ Producing high-quality, safe, and hygienic packaging products within the scope of the BRCGS PM standard, in our hygienic and modern facilities, in full compliance with all applicable legal requirements, by leveraging the latest knowledge and technological infrastructure in the sector, and through our highly competent workforce.
- ❖ Selecting high-quality inputs as a prerequisite for delivering a superior finished product.
- ❖ Identifying all hazards that may pose risks to product safety, legality, and quality; implementing risk analyses to establish appropriate preventive measures; and safeguarding all potential hazards and critical control points through temperature, time, and visual inspection controls, supported by systematic monitoring and measurement.
- ❖ Producing products that are safe for human health under hygienic conditions throughout our manufacturing, storage, and dispatch processes, guided by a consistent risk-based approach.
- ❖ Carrying out quality controls on our products at every stage — incoming materials, in-process, and finished product.
- ❖ Communicating the importance of product safety, legality, and quality to all our employees through regular training programmes, and fostering a strong and lasting culture of product safety, legality, and quality throughout our organisation.
- ❖ Maintaining our ongoing commitment to continuous quality improvement.
- ❖ Ensuring that all our employees play an active role in the implementation of our Quality and Product Safety Policy, and that they work in close collaboration with Senior Management to ensure full alignment of our products with this policy.
- ❖ Conducting our operations as a cohesive team, built on the foundations of mutual respect and trust; delivering products of the required quality in a timely manner; and manufacturing reliable products that are consistently competitive and of ever-improving quality — in line with the needs and expectations of our customers, employees, and all relevant stakeholders.
- ❖ Focusing on our customers' expectations; closely monitoring technological developments in our field; making new investments to increase our company's market share in the sector; measuring customer satisfaction; and planning improvement activities for the system wherever necessary.
